

POND TO PONDLESS CONVERSION... ...COULD THIS BE FOR YOU?

For a variety of reasons, there has been an increasing interest from many of you who want the sight and sound of your waterfall but no longer want the maintenance of a pond with or without fish. While of course we love our ponds and fish, life can change leaving us unable to devote the time that we used to, to caring for our ponds.

Over the years, Complete Ponds has turned MANY ponds into pondless waterfalls. See some examples below:

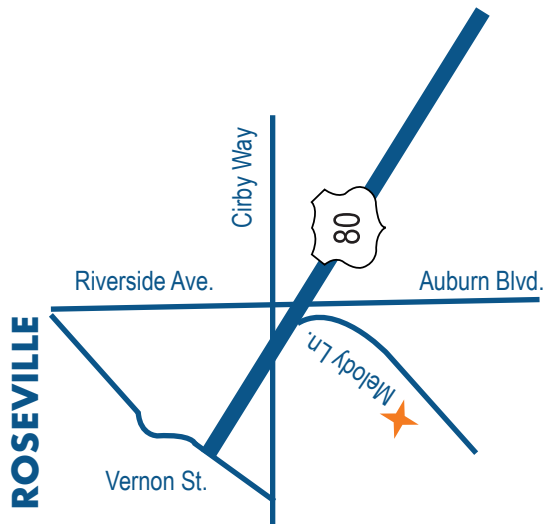

Before

After

If turning your pond into a pondless waterfall sounds like something you're interested in....

Get Ready for Winter!

PONDS

Before you start, turn off your autofill if you have one.

1. Turn off your pump and sprinkle OxyPond Cleaner on to your wet stream and into the pond if you want to bring organic matter from the bottom of the pond up to the surface.
2. After an hour or so, use a net to remove the debris from the surface of the pond
3. Clean out your skimmer (pad & net) weekly and after any wind storms
4. Check to make sure the pump is free of debris
5. Clean or change out filter pads if necessary
6. Trim back plants and remove any dead leaves or floating plants
7. To reduce further maintenance, cover your pond with netting and remove leaves that gather on top of the net that might cause it to sag into the pond. Leaves that accumulate in the pond can cause the water to turn brown. Carbon filters remove tea colored water.
8. Change out 30-50% of your pond water with fresh water. Add de-chlorinator and then test the water to make sure your alkalinity is 120ppm. We sell test kits in our store or you can bring in a sample and we can test it for you. We offer testing for \$5 for alkalinity, ammonia, nitrites, pH & phosphates.
9. Lastly, once the water is balanced, add winter bacteria to the pond. This will reestablish the good bacteria that was lost when you cleaned out the filters in your pond.

PONDLESS WATERFALLS

1. Turn off your pump and sprinkle OxyPond Cleaner on to your wet stream and into the basin
2. After an hour or so, turn the pump back on and watch all the debris flow down into the basin
3. Clean out filtration pads in the waterfall box at the top if applicable
4. Use a wet/dry shop vac to drain out the water in the basin
5. Refill with fresh hose water or turn your auto fill back on and let it fill up your basin
6. Test the alkalinity. Your goal is to be at 120ppm. Add baking soda if necessary. If you know the gallons and the ppm, we can tell you how much baking soda to add
7. Add algicide

If this sounds like something you'd rather not tackle, call in the Pond Squad! We can take care of it for you. We don't fully clean out your pond. Our service typically takes about an hour to an hour and half depending on your pond size. Call to get on the calendar!

Featured Products

AUTOMATIC DOSING SYSTEMS

Automatic Dosing Systems add a variety of water treatments to your pond without you lifting a finger.

If you are going to be out of town, no more worrying about missing a treatment while you're gone. There are multiple treatments to choose from.

FOR PONDS:

1. **Maintain** - Bacteria, flocculant, phosphate binder and chlorine remover.
2. **Clear**- Phosphate binder and flocculant
3. **Clean**- Digests sludge build up. Works to clean between rocks and gravel while keeping pond filters clean, including filter mats and biological filter media.
4. **Protect**- Effectively reduces fish stress, prevents parasites and bacterial infections, and accelerates the healing of superficial wounds, scrapes & cuts.

FOR PONDLESS WATERFALLS:

1. **Prevent**- a special blend of clarifiers to clear and prevent debris and white-scale buildup in the water and on the surface of the fountain, rocks, or gravel. Not safe for fish.
2. **Clean**- Flocculant and phosphate binder to help clump and clear suspended debris. Also prevents and eliminates foam.
